

Install terraformer

=====

wget

<https://github.com/GoogleCloudPlatform/terraformer/releases/download/0.8.24/terraformer-all-linux-amd64>

```
sudo mv terraformer-all-linux-amd64 /usr/local/bin/terraformer
```

```
sudo chmod +x /usr/local/bin/terraformer
terraformer -v
```

Install Terraform Locally

```
wget https://releases.hashicorp.com/terraform/0.12.24/terraform_0.12.24_linux_amd64.zip
unzip terraform_0.12.24_linux_amd64.zip
mv terraform /usr/bin/
sudo mv terraform /usr/bin/
sudo chmod +x /usr/bin/terraform
terraform --version
```

```
mkdir importuateks
cd importuateks/
```

Vi provider.tf

```
terraform {
  required_providers {
    aws = {
      source = "hashicorp/aws"
      version = ">= 5.5.0"
    }
  }
  required_version = ">= 0.13"
}
```

```
provider "aws" {
  region = "xxx"
  access_key = "paste"
  secret_key = "paste"
}
```

Save the file

terraform init

terraformer import aws -r="eks"

Now the path of tf files will be at
pwd/generated/aws/eks
